PURE WATER GLOBAL INC.

“THE BEST  
WATER  
SOLUTION”

Companion Products

**Our Companion Products Make Cleaning & Disinfection of Water even more EFFECTIVE!**

## The Electrolyte Product

Puroxi electrolyte product is a water dispersible nutritional supplement that maintains fluid electrolytes and stabilizes mineral metabolism in livestock for hydration and nutrient transfer.

The ions in our electrolyte product are balanced ratios of potassium to sodium & magnesium, based on several thousand water analyses throughout a large geographical area. Our electrolyte product sustains hydration at the cellular level. All animals perform better when their electrolytes (potassium, sodium, magnesium and chlorides) are balanced at the cellular level, which in turn eliminates dehydration and other health-related problems.

Avoid over-the-counter electrolyte products that usually contain high levels of chlorides. High levels of chlorides increase sodium absorption ratios, which, in turn, can lead to displaced potassium, thus causing dehydration.

## The pH Stabilizer

Puroxi pH Stabilizer is a liquid pH-lowering product when added to water will bring down the pH and will raise the ORP (oxidative reduction potential) thus helping make an oxidizer like our Puroxi (OB) work more effectively. Other acids like citric acid, phosphoric acid or acetic acid don't work nearly as well. Those acids and the oxidizers will lose their effectiveness when combined.

If you don't already have a combination pH/ORP meter, consider purchasing one. It will help when trying to keep the water at the ideal pH and ORP levels.

## The Liquid pH and Hydration Product

This product is the combination of pH Stabilizer and our Puroxi Electrolyte product. It should be used where the pH needs to be lowered and the sodium levels need to be balanced.

## Puroxi (SHMP)

(SHMP) blend actively inhibits corrosion by forming a microscopic, protective film on the inside surface of water pipes. This process limits the release of lead, copper, and iron from water lines and domestic plumbing. This blend helps to reduce rusty water and prevent the formation of iron deposits, resulting in greater Puroxi (OB) residuals in the system. When using these products, Puroxi (OB) can be more effective at controlling biofilm regrowth in the distribution system.

(SHMP) blend also acts as a sequestering agent to reduce stains, discoloration, and rusty water caused by iron and manganese. Threshold treatment with these products holds scale-causing minerals, such as calcium, in solution as well. (SHMP) removes existing scale and iron tuberculation buildup to improve water quality and distribution flow rates.

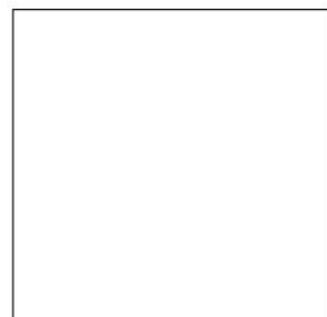

### There are 4 ways to implement Puroxi (OB)

1. Direct with a pump in the line and injected - once injected implement at PPM desired
2. With an eyedropper in a glass of water. Do not exceed 50 PPM as humans, it will taste metallic; it will not hurt you in any way. Actually I drink more when I feel a little run down- but it doesn't taste good.
3. In a Jug premixed can go in fridge and will be fine.
4. In a stock solution - Stock solution is mixing Puroxi (OB) in Water every 24 hours and using a pump to pump it in. This method is used with a 1:128 medicator pump.

Application	Parts Per Million (PPM)	Peristaltic Pump With Puroxi (OB) oz./1000 gal. oz./gal.	Water Medicator Usage Rates Medicator usage must be mixed every 24 hours. Medicator Set at 1:128 Per Gal of Water Stock Solution-50% Puroxi (OB)
Residence			
Residence	25	7	1.0
Livestock and Poultry	50	14	2.0
