

PUROXI (OB) FOR LIVESTOCK

PURE WATER GLOBAL INC.

“THE BEST WATER SOLUTION”

Effective Cleaning & Disinfection of Water for Livestock Operations

Horses, Bison, Camelids (Llamas, Alpacas etc.). Deer, Elk, Goats, Ratite (Emus, Ostrich etc.) Sheep, Veal Calves, Yaks, Animals in Zoos, Game Reserves and all other livestock and animals.

The use of Puroxi (OB) for livestock and animal production is a very important “tool” to improve the quality of the most important nutrient - water. Water is the most quantitative nutrient of the body in any species. Water consumption always determines dry matter feed intake. Water plays many major roles in all of the body’s normal functions. It does not matter what part, stage, life form or industry you are involved with, cleaning and disinfecting is a major contributor to your success. Water actually plays a key role in every part of your operation. Without water there is no production involved on any farm. If water is that important it is equally as important to note that the quality of that water is critical to your operation.

Cleaning & disinfecting are imperative to maintain the well-being and health of any farm operation. This is especially the case in intense modern housing where higher density and productivity increase the stress & predisposition of infection. Bacteria buildup is a consistent issue. Thorough cleaning & adapted disinfection decrease the pathogen level which prevents or breaks the cycle of disease. Water is a natural cleanser.

Puroxi (OB) is a unique water treatment & purification system that has been around for many years. Our “Premium Quality” hydrogen peroxide based product is not only stabilized to give it better efficacy, it also has a proprietary formulation and is custom-made to fit your water needs. Our product helps disinfect and keep your plumbing clean and unplugged. With the addition of our stabilizer you will see long-lasting efficacy, and protection for your pipes against corrosion. It also helps bind and tie up contaminants, while softening your water approximately 25%.

Livestock & animal operations have reported many advantages & benefits over the years, however, each farm has its own unique challenges and there are many factors involved which will determine our recommendations and affect the success of our product. Puroxi (OB) will clean your plumbing, keep your water disinfected, and it will naturally help with your animals’ health, since water is the most consumed item on any farm, big or small. It creates a washing and flushing process throughout the animal’s entire system, cleaning and flushing the body to help give your animals’ optimal health. It is also an important NUTRIENT.

Contributing factors that can hinder or affect our product are: stray voltage, micro toxins, molds in feed, hygiene, and equipment up-keep and of course good management. Bacteria are everywhere: in soil, in water, on animals and on humans. The purpose of disinfection is to decrease infection pressure and thus decrease disease prevalence. Choosing the disinfectant adapted to each specific situation leads to effective prevention and profitable operations. Remember, bacteria and contaminants “do not take vacations”, so continuous disinfection is the best protocol you can use.

If you could disinfect, keep your plumbing clean and free from blockage, and see clean water and better health as a result, would that be of benefit to your operation? If so our product is definitely your answer!

We start out with a water analysis based on an independent water report. You see, we have to know what you need before we can give you any advice! We then give you our recommendations and pricing; you make a decision that is right for you and we install the product. The first thing you will see is clean water. If you have color, we might suggest some filtration; if 25% softening is not enough, we might recommend a softener. We’re here to help you.

Each system is specifically designed for you, to create **clean ~ clear ~ nutritional water** for you and your animals.

PUROXI (OB) FOR LIVESTOCK

PURE WATER GLOBAL INC.

“THE BEST WATER SOLUTION”

Livestock & animal operations all over the world have reported some of the benefits listed below. We are not making any wide-ranging or extensive claims, however, we feel that we can address your weakest links. If you have no concern with diseases in your operation, for example, we are definitely not going to be able to help you with that. However, when we look at the problems associated with your weakest links, you will see improvements in those areas. The most important process that our product does is to supply increased oxygen levels in the body, thus making the hemoglobin's capacity to carry nutrients to the blood more effective. The actual benefits will depend on your own unique conditions.

Livestock and Animal Producers Report:

- Better Feed Efficiency (increased water/feed consumption)
 - Less incidence of disease,
 - Lowered medication and vet bills
 - Cleaner well pumps/water pipes/waterers
 - Improved daily gains
 - Increased feed conversion
 - Better conception and healthier offspring
 - A natural deworming effect
 - Lower death loss
 - Reduced Shipping Fever
 - Improved hoof conditions
 - Fewer waterborne disease
- And the list goes on....*

Livestock and animal producers notice consistently higher and more even water and feed intake with less ups and downs. These results in improved average daily gain (ADG). Increases result in return on investment (ROI) speaks for itself.

Our Dealers can recommend proper levels for a 1:128 medicator. Please ask them for levels when you become a customer.

Remember, these are the different claims from different operations around the world, based on their own unique results and experiences. All water is different; every environment is different; every feed ration is different; and of course, every livestock & animal operation is different (existing conditions, how it's run, etc.). We cannot guarantee you will see any specific result listed above. But what we can guarantee is that you will have **clean ~ clear ~ nutritional water**, to begin with, in a very short time. Then your livestock & animals will be drinking the healthy, nutritional water and as a result you will see health benefits from that alone. Then the raising the oxygen levels will further contribute to their overall health.

If this makes sense to you, please give us a call; we would love to have you as a customer.
