

PUROXI (OB)

PURE WATER GLOBAL INC.

“THE BEST
WATER
SOLUTION”

for CANNABIS

Effective Disinfection of Water for Leafy Crops

While medical marijuana has been legal for some time throughout North America and other countries, recreational marijuana has always been a more lucrative industry. With over 20 states in the U.S. and other countries like Canada, legalizing Cannabis, the industry is booming. It is now worth over 10 billion dollars, and climbing at a rate of over 60% annually. By 2020, it's expected that the cannabis industry in the U.S. will create up to a quarter of a million new jobs. This makes the cannabis industry a big job-growth driver; bigger than the traditional big employers, like the government or the manufacturing industry. Medical practitioners and cannabis aficionados alike are now recognizing the many health benefits of cannabis, against the effects of glaucoma, cancer, depression, and dozens of other symptoms and ailments.

The use of **Puroxi (OB)** for Cannabis is an important “tool” to improve the quality of the most important nutrient - **water**. Doing a water analysis prior to any application is highly recommended. In addition to proper temperature, humidity and light levels throughout the growth cycle, special care should be taken to ensure the proper **pH level** at all times. pH issues are the one of the biggest issues most growers face in the grow room. pH imbalances can lead to nutrient lock outs (which are generally misdiagnosed as nutrient deficiencies), which can lead to over-feeding of nutrients. This results in salt build-ups, causing even more stress at the root system. Puroxi can help you maintain your pH levels. The ideal pH range is 5.7 to 6.1 to ensure maximum absorption of all the minerals and nutrients necessary for healthy balanced growth. A good quality pH pen is indispensable to every grower.

The use of **Puroxi (OB) Water** in the germination process of similar crops has proven to help with fungal and insect infestation and other issues like bacteria, etc. It also accelerates the germination process. Many of our customers credit their methods and application of Puroxi products with stronger, healthier plants that don't droop and are more resistant to fungal and insect infestation. They also had stronger, healthier root systems, enabling easy uptake of water and nutrients.

Soaking seeds with it will disinfect them and improve seedling production. Fusarium soil fungus, for example, as well as almost all fungi, can actually be controlled with Puroxi (OB). After planting, the use of Puroxi (OB) to water the plants has helped to create a fantastic growth size, as documented by our customers. Fungi thrive in hot, humid environments, such as a grow room. They can severely affect the leaves, as well as the root system (the plant's vital organ!) by choking off water and nutrient uptake. Since fungus does not like oxygen, our product is extremely effective in controlling it, due to increased oxygen levels in the plant, without any chemical residue, since our product breaks down to hydrogen and water. We also have found our product line to be very effective in decreasing bacteria build-up and pathogen levels, which in turn breaks the cycle of disease or prevents it altogether.

PURE WATER GLOBAL INC.

“THE BEST WATER SOLUTION”

for CANNABIS

Watering is important for marijuana plants for obvious reasons. What may not be so obvious, however, is that the **quality of the water** is equally important. Using room temperature water WITHOUT chlorine and other typical contaminants cannot be over-emphasized. Puroxi (OB) contains, encapsulates or neutralizes most chemical and metallic contaminants commonly found in tap and well water. Proper drainage is also necessary in grow rooms to prevent over-watering and root rot.

Puroxi (OB) is a unique water treatment & purification system that has been around for many years. Our “Premium Quality” Product is not only stabilized to give it better efficacy, it also has a proprietary formulation and is custom-made to fit your water needs. Our product also helps disinfect and keep your plumbing clean and unplugged. With the addition of our stabilizer you will see long-lasting efficacy, and protection for your pipes against corrosion. It also helps bind and tie up contaminants, while softening your water up to 25%.

By using our application formula in your water you will see results of improvement, however, the observations listed above are from specific situations, based on their own unique results and experiences. All water is different; every environment is different; every operator is different; and of course, every soil and seed is different. We cannot guarantee you will see any specific result listed above. But what we can guarantee is that you will immediately have clean, clear, nutritional water, and in a very short time, better results than without our applications. When your plants and soil have healthy, nutritional water it's a good start. Raising the oxygen levels will further contribute to your overall production success.

Application rates vary from operation to operation. For well-designed application rates, contact the Distributor in your area. If there is no Distributor, please contact us directly.

Note: This is not a “magic bullet” solution. Our customized formulation, procedures, and protocol depend on many factors, and are available exclusively to our customers.

If this makes sense to you, please give us a call; we would love to have you as a customer.

Caution: do not add fertilizers in the water at the same time as you add Puroxi (OB), without doing a Jar Test. Some fertilizers might plug emitters when mixed with oxygen. Always consult either your local Distributor or us prior to application to make sure it is done right.

CLEAN ~ CLEAR ~ NUTRITIONAL WATER IS OUR PASSION!
